INSTALLATIONS INSTRUCTIONS for M.O.R.E.™ LS9091

This is the proper way to install the shackles on the FRONT of the YJ. The long leg down, bolt-in center brace back. This way, it acts as a "Anti-Kick-Back" shackle.

Contents of LS9091:

4-side plates	2-center braces	4-drilled sleeves
4-drilled shackle bolts	2-center brace bolts	
6-crimp-loc nuts	8-polyurethane bushing halves	

This is the proper location for the bolt-in center brace. The long leg up, center brace forward. This way, the shackle can clear the rear crossmember on suspension compression.

The "Boomerang" shackles fit the front or rear of your Jeep® YJ Wrangler. The above pictures show the proper way to install them. After removing the stock shackles, install the Boomerang shackles as shown in the picture(s) above. Torque the bolt-in center brace bolt/nut to 55 Lb. Ft. torque. Tighten the greaseable shackle bolts to 30 Lb. Ft. torque. Lube with your favorite chassis grease.
